What are tardigrades?

Tardigrades are tiny, microscopic animals that can be found in water, soil, and even the vacuum of space. They are also known as water bears because of their unique appearance, which resembles that of a miniature bear.

Tardigrades are incredibly resilient creatures. They can survive extreme temperatures, radiation, and even dehydration. They can also go into a

state of suspended animation called cryptobiosis, which allows them to survive for years without food or water.

Fun facts about tardigrades

- Tardigrades are the only animals that can survive in the vacuum of space.
- Tardigrades can go into a state of suspended animation called cryptobiosis, which allows them to survive for years without food or water.
- Tardigrades can reproduce both sexually and asexually.
- Tardigrades have a lifespan of about two years.
- Tardigrades are found in all parts of the world, from the tropics to the poles.
